

# Alchemy 测试网

## 测试网水龙头

<https://www.alchemy.com/faucets/ethereum-sepolia>

## Alchemy

<https://dashboard.alchemy.com/>

- 注册账号
- 创建app
- 获取你的api\_key添加到hardhat中
- 注意选测试网不要选错网络（花费的你真实的money）

## 课程测试网部署的address (sepolita eth网络)

0x1eA11d3eEc51ed07c319046c04FAFdEc478Bc915

The screenshot shows the Alchemy Sepolia app interface. On the left is a dark sidebar with navigation links: Search, Overview, Apps (which is selected), Products, Chain Services, Pollups, PIs, Code API, FT API, Token API, Transfers API, Simulation API, Smart Websockets, Data Services, and Webhooks. The main area has a header bar with the text "This app was previously on Ethereum Sepolia but can now be used on [all networks](#)". Below this is a breadcrumb navigation with "← Apps" and the title "Sepolia". A top right corner shows "API Key 1-zzZAVe4;" and a "All networks" button. The central part of the screen is divided into four sections: "Ethereum" (selected), "Arbitrum", "Polygon PoS", and "Polygon zkEVM". Each section contains a network icon, a dropdown menu set to "Sepolia", a dropdown menu set to "HTTPs", and a URL field. Red arrows point to the "Sepolia" dropdown in the Ethereum section and the URL field in the Ethereum section.

| Network       | Selected Network | Protocol | URL   |
|---------------|------------------|----------|---|
| Ethereum      | Sepolia          | HTTPs    | <a href="https://eth-sepolia.g.alchemy.com/v2/1-zzZAVe4ZEFLv_dK...">https://eth-sepolia.g.alchemy.com/v2/1-zzZAVe4ZEFLv_dK...</a> |
| Arbitrum      |                  |          | <a href="https://arb-mainnet.g.alchemy.com/v2/">https://arb-mainnet.g.alchemy.com/v2/</a>   |
| Polygon PoS   | Mainnet          | HTTPs    | <a href="https://polygon-mainnet.g.alchemy.com/v2/1-zzZAVe4ZEFL...">https://polygon-mainnet.g.alchemy.com/v2/1-zzZAVe4ZEFL...</a> |
| Polygon zkEVM |                  |          | <a href="https://polygonzkvm-mainnet.g.alchen...">https://polygonzkvm-mainnet.g.alchen...</a>                                     |
